

## Clean Loni.

Clean surroundings influence the health of the society. Healthy thoughts make the society strong. Development has to occur from the grass root level and for a country villages are the base. Keeping this in view, the Gurukulians had taken the initiation of keeping the surroundings clean and aimed toward the Loni village. The open place which was in front of the Zill Parishad Primary School, Lonikalbhor, was found to be very untidy with grass and drain water. This was enabling the breed of the mosquitos and flies which are resulting in the spread of the contagious disease and as a result, the children were frequently falling sick.

The Gurukulians of grade 11 have started the day with a play and educated the school children about the importance of hygiene. Action speaks more than words. After the demonstration, the students have cleaned the grass with spades and cleared the path for the drain water for a free flow. The stagnant water is cleared.

The ground was also untidy with lot of plastic. The students have picked the plastic and cleared the ground. Then the school authorities and the local bodies realized the vacant land in front of the school which can be used for the activities for the school children. The school children were very happy and the local authorities have thanked the school for taking the initiation. They have ensured the Gurukulians that they will be maintaining the ground as it has been given to them.

## Clean Rajbaug.

The Rajbaug complex is maintained by the MIT group. The students of different educational institutes maintain a clean environment but the visitors will be littering. The Gurukulians have taken initiation and cleaned the plastic. They have also placed hoardings in different places which inform about the importance of cleanliness and hygiene. Dustbins were also placed in different prime locations so that the scrap can be disposed in a proper place.
